HOANG ANH QUOC LE

lhoanganhquoc@gmail.com | **linkedin.com/in/anh-quoc** | **github.com/AnhQuoc533**

Technical Skills

Programming Languages: Python, Java, C/C++, SQL (PostgreSQL, SQL Server).
Libraries and Frameworks: NumPy, Pandas, Matplotlib, scikit-learn, AutoGluon, PyTorch.
Tools: Amazon Web Services, Git, GitHub, PyCharm, VS Code, Jupyter Notebook, MS Office.

Projects

Automated Machine Learning Workflow with AWS *View project*

- Architected and deployed an end-to-end automated machine learning pipeline on AWS to categorize customer reviews based on usefulness, using the BlazingText algorithm.
- Orchestrated multiple Amazon SageMaker AI microservices through AWS Step Functions, seamlessly chaining data preprocessing, model training, deployment, and inference into a unified, event-driven workflow.
- Configured IAM roles and policies to enforce least-privilege access across all services and set up Amazon CloudWatch Logs to monitor execution and resolve errors.
- Authored and maintained an open-source technical guidebook on GitHub documenting best practices for developing ML workflows on AWS, continuously updated with new learnings.
- Utilized: Python, Amazon Web Services (SageMaker AI, Step Functions, Lambda, S3, IAM, CloudWatch).

Basic Neural Network Framework *View project*

- Designed and constructed a gradient-based neural network framework from scratch using Numpy, enabling the development of custom multi-layer perceptron models.
- Integrated a unit testing framework to set up automated tests, assuring high-quality and reliable code.
- Automated global distribution and installation by packaging and publishing the framework project to PyPI, reducing manual deployment steps to zero.
- Utilized: Python, NumPy, pytest, setuptools, twine, PyPI.

Flower Image Classifier *View project*

- Applied transfer learning techniques to create, train, and implement an AI-powered flower image classifier with a test accuracy of approximately 83.5%, accomplishing proficiency in working with PyTorch framework.
- Engineered a command-line application for a customizable image classifier with a user-defined architecture and ensured error-free execution.
- Utilized: Python, PyTorch, Matplotlib, argparse, Jupyter Notebook.

Pong Game & Snake Game *View project: 1 | 2*

- Harnessed the turtle module to design the games, and PyInstaller to compress Python projects into Windows executable files (.exe) for easy distribution.
- Conducted thorough game testing and bug fixing to deliver a smooth and optimal gameplay experience as well as integrated graphic art to enhance the visual experience for players.
- Released 6 versions of projects on GitHub in total throughout the development process, allowing for easy access and community engagement.
- Utilized: Python, turtle, PyInstaller, GitHub.

Employee Management Program *View project*

- Led a team of 4 fellow students to design and implement a user-friendly and versatile program that streamlines the organization and presentation of employee data.
- Applied expertise in C/C++ and Object-Oriented Programming design principles to enhance the functionality and user experience of the program, ultimately achieving project objectives.
- Utilized: C/C++, Object-Oriented Programming (OOP), design pattern.

Education

George Mason University **Fairfax, VA**
Bachelor of Science in Computer Science *January 2025 – Present*

- Cumulative GPA: 3.86
- Relevant Coursework: Low-level Programming, Data Structures, Computer Systems and Programming, Analysis of Algorithms, Software Engineering, Database Concepts, Intro AI, Mobile Application Development.

Northern Virginia Community College **Annandale, VA**
Associate of Science in Computer Science *January 2022 – December 2024*

- Cumulative GPA: 3.8
